DETAILED ACTION

1. This case has been reassigned to a new Examiner.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/20/2007 has been entered.

Response to Arguments

3. Applicant's arguments with respect to claims 1-26 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 6. Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Levergood et al. (US 5,708,780) in view of Garrick et al. (US 5,968,125).

Art Unit: 2145

- 7. In regard to claims 1, 9, and 18, Levergood disclosed a method for accessing websites. In Levergood, a request is made with a URL from a Web browser. (Levergood, column 5, lines 17-41) If the request is sent for a particular link, the URL is recreated with a new URL including a status identifier allowing for redirection to another webpage via a REDIRECT command. (Levergood, column 6, lines 27-57) Levergood further includes logging of client access to web pages as a tracking feature. (Levergood, column 8, lines 14-50) Levergood failed to disclose this functionality with respect to the "injection" of client-side tracking code into a web page. However, Garrick - in the analogous field of redirecting URLs of web pages and logging the requests of users (Garrick, column 5, lines 39-59; column 8, lines 5-55; column 9, lines 1-18) - teaches a plug-in which is used to implement the tracking features that are taught both in Garrick and in Levergood (Garrick, column 9, lines 21-46). Therefore, it would have been obvious to one of ordinary skill in the art to extend the functionalities of Levergood with the plug-in techniques taught by Garrick in order to allow for access by the client to the logging features of tracking web page access. This is useful for a multitude of reasons, including security, parental access control, advertising tracking, and monitoring of a user's internet activities. (Levergood, column 8, lines 41-50) (Garrick, column 3, lines 33-56)
- 8. In regard to claims 2, 10, and 20, Levergood further discloses an area identifier that identifies an area on the web page in which the corresponding selectable link is located. (Indicated by Levergood, column 8, lines 33-38, which "suggest[s] where to insert links to provide more direct access".)
- 9. In regard to claims 3, 11, and 21, Levergood further discloses the link identifier further comprises a link type identifier that identifies a type of link of the corresponding selectable link. (Levergood, column 5, lines 54-65)
- 10. In regard to claims 4, 13, and 22, Levergood further discloses the tracking identifier further comprises a container identifier that identifies a container in which the corresponding selectable link is located (Levergood, column 6, lines 1-16).
- 11. In regard to claims 5 and 23, Levergood further discloses the tracking identifier further comprises a link index that is an index of the corresponding selectable link inside the container that is identified by the container identifier (Levergood, column 6, lines 1-16).

Art Unit: 2145

- 12. In regard to claims 6, Levergood further discloses the step of confirming that the web page loaded properly and is viewable at the client before proceeding with the tracking function. (Levergood, column 6, line 58 column 7, line 20)
- 13. In regard to claims 7, Levergood further discloses the information related to the corresponding selectable link further comprises the web page on which the corresponding selectable link is located and an area of the web page in which the corresponding selectable link is located. (Levergood, column 8, lines 1-13 includes the original URL and the current domain in the identifier. The area of the web page is indicated by Levergood, column 8, lines 33-38, which "suggest[s] where to insert links to provide more direct access".)
- 14. In regard to claims 8, Levergood further discloses terminating the processing of further steps for each of the one or more selectable links that does not include the respective link identifier. (Levergood, column 5, lines 41-49; column 8, lines 1-13. Levergood does not track a link that does not include a valid SID.)
- 15. In regard to claims 12, Levergood further discloses the tracking module does not execute if the selectable link does not contain a link identifier. (Levergood, column 5, lines 41-49; column 8, lines 1-13. Levergood does not track a link that does not include a valid SID.)
- 16. In regard to claims 15, Levergood further discloses the tracking identifier further comprises a modified link identifier that is different from the link identifier that is included in the selectable link.

 (Levergood, column 7, line 35 column 8, line 13 changes the link identifier from the identifier shown in column 7, line 40 to the identifier shown in column 8, line 6)
- 17. In regard to claims 16, Levergood further discloses the client-side tracking code is further configured to test a connection with the tracking system and skip the tracking event if the tracking system does not respond to the client within a specified timeout period. (Levergood, column 8, lines 23-26)
- 18. In regard to claims 17, Levergood further discloses the specified timeout period further comprises one and one-half seconds. (Levergood indicates an expiration timer in column 8, lines 23-26. It would have been obvious to one of ordinary skill in the art to set this timer to any length of time, including one

Application/Control Number: 10/645,224

Art Unit: 2145

and one-half seconds, for flexibility purposes and to allow for discrepancies dealing with transmission delay and bandwidth limitations).

- 19. In regard to claim 19, Levergood further discloses the selectable tracking links are identified by inclusion of a link identifier in each selectable tracking link. (Levergood, column 5, lines 54-65)
- 20. In regard to claim 24, Levergood further discloses the tracking information further comprises information identifying the web page. (Levergood, column 5, lines 54-65)
- 21. In regard to claim 25, Levergood further discloses information identifying a location of the corresponding selectable tracking link on the web page. (Indicated by Levergood, column 8, lines 33-38, which "suggest[s] where to insert links to provide more direct access".)
- 22. In regard to claim 26, Levergood further discloses the tracking information further comprises page view information. (Levergood, column 8, lines 14-26)

Conclusion

23. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
